

# Digital Temperature Controllers

## E5CN/E5CN-U

**This Best-selling General-purpose 48×48-mm Temperature Controller Is Now Even Better. Easy, Dependable, Complete Functionality, and 11-segment Displays.**

- Controllers now available with analog inputs.
- High-speed sampling at 250 ms.
- Transfer output provided for easy output to recorders.
- Voltage outputs (to drive SSRs) for both heating and cooling control. Can be used for alarms to provide three alarm outputs.
- Models available with three-phase heater burnout detection and SSR fault detection.
- Easy setting with 11-segment displays.
- Connect to either a thermocouple or platinum-resistance thermometer with the same model.
- Easily see the status from a distance with PV display with three-color switching function.
- Setting protection indicator informs operator when protection is enabled.
- Manual output provided.
- Controller available with long-life relay output (available soon).

**Note:** Refer to Precautions on page 14.

## Features

**NEW**

**Note:** Refer to page 17 for information on changes in comparison to previous models.

### Improved Functions for a Wider Range of Application

#### Control Analog Values, such as Pressures, Flowrates, and Levels

The new E5CN Series now also includes models that accept analog inputs, enabling control applications other than for temperature, including pressure, flowrate, level, humidity, and weight control.

**Note:** E5CN-□L (Models with Analog Inputs)

#### High-speed Sampling at 250 ms

The previous sampling time of 500 ms has been reduced by half to 250 ms. This enables the new E5CN to handle application requiring even greater response speed and accuracy.

#### Easy Connector to a Recorder

A transfer output now makes it easy to connect to a recorder or PLC Analog I/O Unit.

**Note:** E5CN-C□ (Models with Current Outputs)

#### Voltage Outputs (to Drive SSRs) for Both Heating and Cooling Control. Can Be Used for Alarms to Provide Three Alarm Outputs.

Voltage outputs can be used for both heating and cooling for Models with Two Control Outputs. Also, control output 2 can be set for use as an alarm output, to enable using up to three alarm outputs.

**Note:** E5CN-□Q (Models with Two Control Outputs)

#### Three-phase Heater Burnout Detection

With Models with Three-phase Heater Burnout and SSR Failure Detection, two current transformers can be connected to detect both heater burnout and SSR failure at the same time, reducing costs because a separate heater burnout alarm device is not required. SSR failure detection can be used even with Models with Single-phase Heater Burnout Alarms.

**Note:** E5CN-□HH□ (Models with Three-phase Heater Burnout and SSR Failure Detection)

### Easy, Dependable, and Even Faster

#### Easy Setting with 11-segment Displays

The new E5CN features 11-segment displays to make text easier to read, eliminating the need to decode displays when trying to set parameters, as was necessary with previous temperature controllers.

#### Multi-input Capability with One Controller

Connect to either a thermocouple or platinum-resistance thermometer with the same model. Model selection is simplified, stocks are reduced, and fewer maintenance parts are required.

#### Easily See Status from a Distance with PV Display with Three-color Switching Function

#### Setting Protection Indicator Informs Operator when Protection Is Enabled

A special icon on the display panel lights to let the operator know when setting protection has been set.

# Model Number Structure

					Current	E5CN-C2ML-500

## ■ Option Units

The E5CN provides optional functionality when one of the following Option Units is mounted.

Functions			Model
Communications	Heater burnout/SSR failure detection		E53-CNH03N
Communications			E53-CN03N
	Heater burnout/SSR failure detection	Event inputs	E53-CNHBN
		Event inputs	E53-CNBN
Communications	3-phase heater burnout/SSR failure detection		E53-CNHH03N
Communications		Control output 2 (voltage output)	E53-CNQ03N
	Heater burnout/SSR failure detection	Control output 2 (voltage output)	E53-CNQHN

**Note:** Option Units cannot be used for Plug-in models.  
These Option Units can be used for the new E5CN models only.

Attach the appropriate terminal labels.

# Specifications

## ■ Ratings

Item		Power supply voltage	100 to 240 VAC, 50/60 Hz	24 VAC, 50/60 Hz or 24 VDC
Operating voltage range		85% to 110% of rated supply voltage		
Power consumption	E5CN	7.5 VA max. (E5CN-R2T: 3.0 VA at 100 VAC)		5 VA/3 W max. (E5CN-R2T: 2.7 VA at 24 VAC)
	E5CN-U	6 VA max.		3 VA/2 W max.
Sensor input		Models with temperature inputs Thermocouple: K, J, T, E, L, U, N, R, S, or B Platinum resistance thermometer: Pt100 or JPt100 Infrared temperature sensor: 10 to 70°C, 60 to 120°C, 115 to 165°C, or 160 to 260°C Voltage input: 0 to 50 mV		
		Models with analog inputs Current input: 4 to 20 mA or 0 to 20 mA Voltage input: 1 to 5 V, 0 to 5 V, or 0 to 10 V		
Input impedance		Current input: 150 Ω, Voltage input: 1 MΩ (Use a 1:1 connection when connecting the ES2-HB.)		
Control outputs	Relay outputs	E5CN	SPST-NO, 250 VAC, 3 A (resistive load), electrical life: 100,000 operations, minimum applicable load: 5 V, 10 mA	
		E5CN-U	SPDT, 250 VAC, 3 A (resistive load), electrical life: 100,000 operations, minimum applicable load: 5 V, 10 mA	
	Voltage outputs	E5CN E5CN-U	Output voltage: 12 VDC ±15% (PNP), max. load current: 21 mA, with short-circuit protection circuit	
	Current outputs	E5CN	4 to 20 mA DC/0 to 20 mA DC, load: 600 Ω max., resolution: approx. 2,700	
	Long-life relay outputs	E5CN	SPST-NO, 250 VAC, 3 A (resistive load), electrical life: 100,000 operations, minimum applicable load: 5 V, 100 mA (Do not connect a DC load.)	
Alarm outputs		SPST-NO, 250 VAC, 1 A (resistive load), electrical life: 100,000 operations, minimum applicable load: 1 V, 1 mA		
Event inputs	Contact inputs	ON: 1 kΩ max., OFF: 100 kΩ min.		
	Non-contact input	ON: Residual voltage: 1.5 V max., OFF: Leakage current: 0.1 mA max. Discharge current: Approx. 7 mA per point		
Control method		ON/OFF control or 2-PID control (with auto-tuning)		
Setting method		Digital setting using front panel keys		
Indication method		11-segment digital display and individual LED indicators (7-segments displays also possible) Character height: PV: 11 mm, SV: 6.5 mm		
Other functions		Manual output, heating/cooling control, transfer output (on some models), loop burnout alarm, multi SP, SP indicator, MV limiter, input digital filter, self-tuning, temperature input shift, run/stop, protection functions, etc.		
Ambient operating humidity		-10 to 55°C (with no icing or condensation), for 3-year warranty: -10 to 50°C		
Ambient operating humidity		25% to 85%		
Storage temperature		-25 to 65°C (with no icing or condensation)		

## ■ Input Ranges

### Thermocouples/Platinum Resistance Thermometers (Multi-inputs)

The applicable standards for the input types are as follows:

K, J, T, E, N, R, S, B: IEC584-1

L: Fe-CuNi, DIN 43710-1985

U: Cu-CuNi, DIN 43710-1985

Pt100: IEC 751

Shaded settings are the default settings.

### Models with Analog Inputs

Input Type	Current		Voltage		
Input specification	4 to 20mA	0 to 20 mA	1 to 5 V	0 to 5 V	0 to 10 V
Setting range	Usable in the following ranges by scaling: -1999 to 9999, -199.9 to 999.9, -19.99 to 99.99 or -1.999 to 9.999				
Setting number	0	1	2	3	4

Shaded settings are the default settings.

## Alarm Types

Select alarm types out of the 12 alarm types listed in the following table.

Set value	Alarm type	Alarm output operation	
		When X is positive	When X is negative
0	Alarm function OFF	Output OFF	
1 (See note 1.)	Upper- and lower-limit		(See note 2.)
2	Upper limit		
3	Lower limit		
4 (See note 1.)	Upper- and lower-limit range		(See note 3.)
5 (See note 1.)	Upper- and lower-limit with standby sequence		(See note 4.)
6	Upper-limit with standby sequence		
7	Lower-limit with standby sequence		
8	Absolute-value upper-limit		
9	Absolute-value lower-limit		
10	Absolute-value upper-limit with standby sequence		
11	Absolute-value lower-limit with standby sequence		
12 (See note 6.)	LBA (for alarm 1 only)	---	

**Note 1.** With set values 1, 4 and 5, the upper and lower limit values can be set independently for each alarm type, and are expressed as "L" and "H."

**2.** Set value: 1, Upper- and lower-limit alarm

**3.** Set value: 4, Upper- and lower-limit range

**4.** Set value: 5, Upper- and lower-limit with standby sequence  
For Upper- and Lower-Limit Alarm Described Above

- Case 1 and 2  
Always OFF when the upper-limit and lower-limit hysteresis overlaps.
- Case 3: Always OFF

**5.** Set value: 5, Upper- and lower-limit with standby sequence  
Always OFF when the upper-limit and lower-limit hysteresis overlaps.

**6.** Set value: 12, LBA can be set only for alarm 1.

Set the alarm types for alarms 1 to 3 independently in the initial setting level. The default setting is 2 (upper limit).

## ■ Characteristics

<b>Indication accuracy</b>	Thermocouple: (See note 1.) E5CN: ( $\pm 0.5\%$ of indicated value or $\pm 1^\circ\text{C}$ , whichever is greater) $\pm 1$ digit max. E5CN-U: ( $\pm 1\%$ of indicated value or $\pm 2^\circ\text{C}$ , whichever is greater) $\pm 1$ digit max. Platinum resistance thermometer: ( $\pm 0.5\%$ of indicated value or $\pm 1^\circ\text{C}$ , whichever is greater) $\pm 1$ digit max. Analog input: $\pm 0.5\%$ FS $\pm 1$ digit max. CT input: $\pm 0.5\%$ FS $\pm 1$ digit max.	
<b>Hysteresis</b>	Models with thermocouple/platinum resistance thermometer (multi-input) inputs: 0.1 to 999.9 EU (in units of 0.1 EU) Models with analog inputs: 0.01 to 99.99% FS (in units of 0.01% FS)	
<b>Proportional band (P)</b>	Thermocouple/platinum resistance thermometer (multi-input) models: 0.1 to 999.9 EU (in units of 0.1 EU) Models with analog inputs: 0.1 to 999.9% FS (in units of 0.1% FS)	
<b>Integral time (I)</b>	0 to 3999 s (in units of 1 s)	
<b>Derivative time (D)</b>	0 to 3999 s (in units of 1 s) (See note 3.)	
<b>Control period</b>	0.5, 1 to 99 s (in units of 1 s)	
<b>Manual reset value</b>	0.0 to 100.0% (in units of 0.1%)	
<b>Alarm setting range</b>	-1999 to 9999 (decimal point position depends on input type)	
<b>Sampling period</b>	250 ms	
<b>Affect of signal source resistance</b>	Thermocouple: $0.1^\circ\text{C}/\Omega$ max. (100 $\Omega$ max.) (See note 4.) Platinum resistance thermometer: $0.4^\circ\text{C}/\Omega$ max. (10 $\Omega$ max.)	
<b>Insulation resistance</b>	20 M $\Omega$ min. (at 500 VDC)	
<b>Dielectric strength</b>	2,000 VAC, 50 or 60 Hz for 1 min (between terminals with different charge)	
<b>Vibration resistance</b>	<b>Malfunction</b>	10 to 55 Hz, 20 m/s <sup>2</sup> for 10 min each in X, Y, and Z directions
	<b>Destruction</b>	10 to 55 Hz, 0.75-mm single amplitude for 2 hrs each in X, Y, and Z directions
<b>Shock resistance</b>	<b>Malfunction</b>	100 m/s <sup>2</sup> min., 3 times each in X, Y, and Z directions
	<b>Destruction</b>	300 m/s <sup>2</sup> min., 3 times each in X, Y, and Z directions
<b>Weight</b>	<b>E5CN</b>	Controller: Approx. 150 G, Mounting Bracket: Approx. 10 g
	<b>E5CN-U</b>	Controller: Approx. 110 G, Mounting Bracket: Approx. 10 g
<b>Degree of protection</b>	<b>E5CN</b>	Front panel: NEMA4X for indoor use (equivalent to IP66) Rear case: IP20, Terminal section: IP00
	<b>E5CN-U</b>	Front panel: Equivalent to IP50, rear case: IP20, terminals: IP00
<b>Memory protection</b>	Non-volatile memory (number of writes: 1,000,000 operations)	

- Note:**
- The indication of K thermocouples in the  $-200$  to  $1300^\circ\text{C}$  range, T and N thermocouples at a temperature of  $-100^\circ\text{C}$  max., and U and L thermocouples at any temperature is  $\pm 2^\circ\text{C} \pm 1$  digit maximum. The indication accuracy of the B thermocouple at a temperature of  $400^\circ\text{C}$  max. is not specified. The indication accuracy of the R and S thermocouples at a temperature of  $200^\circ\text{C}$  max. is  $\pm 3^\circ\text{C} \pm 1$  digit max.
  - "EU" stands for Engineering Unit and is used as the unit after scaling. For a temperature sensor, the EU is  $^\circ\text{C}$  or  $^\circ\text{F}$ .
  - When robust tuning (RT) is ON, the differential time is 0.0 to 999.9 (in units of 1 s).
  - BRS sensors:  $0.2^\circ\text{C}/\Omega$  max. (100  $\Omega$  max.)

## ■ Communications Specifications

<b>Transmission line connection method</b>	RS-485 multipoint
<b>Communications</b>	RS-485 (two-wire, half duplex)
<b>Synchronization method</b>	Start-stop synchronization
<b>Baud rate</b>	1200, 2400, 4800, 9600, 19200, or 38400 bps
<b>Transmission code</b>	ASCII
<b>Data bit length</b>	7 or 8 bits
<b>Stop bit length</b>	1 or 2 bits
<b>Error detection</b>	Vertical parity (none, even, odd) Frame check sequence (FCS) with SYSWAY Block check character (BCC) with CompoWay/F or CRC-16 Modbus
<b>Flow control</b>	None
<b>Interface</b>	RS-485
<b>Retry function</b>	None
<b>Communications buffer</b>	40 bytes
<b>Communications response wait time</b>	0 to 99 ms Default: 20 ms

**Note:** The baud rate, data bit length, stop bit length, and vertical parity can be individually set using the Communications Setting Level.

## ■ Current Transformer (Sold Separately)

### Ratings

<b>Dielectric strength</b>	1,000 VAC for 1 min
<b>Vibration resistance</b>	50 Hz, 98 m/s <sup>2</sup>
<b>Weight</b>	E54-CT1: Approx. 11.5 g, E54-CT3: Approx. 50 g
<b>Accessories (E54-CT3 only)</b>	Armatures (2) Plugs (2)

## ■ Heater Burnout Alarms and SSR Failure Detection Alarms

(E5CN Models with Heater Burnout and SSR Failure Detection Alarms)

<b>Maximum heater current</b>	50 A AC
<b>Input current indication accuracy</b>	±5% FS ±1 digit max.
<b>Heater burnout alarm setting range</b>	0.1 to 49.9 A (in units of 0.1 A) 0.0 A: Heater burnout/SSR failure alarm output turned OFF. 50.0 A: Heater burnout/SSR failure alarm output turned ON. Minimum detection ON time: 190 ms (See note 1.)
<b>SSR failure detection alarm setting range</b>	0.1 to 49.9 A (in units of 0.1 A) 0.0 A: Heater burnout/SSR failure alarm output turned ON. 50.0 A: Heater burnout/SSR failure alarm output turned OFF. Minimum detection OFF time: 190 ms (See note 2.)

- Note:**
1. If the ON time of control output 1 is less than 190 ms, heater burnout detection and the heater current will not be measured.
  2. If the OFF time of control output 2 is less than 190 ms, SSR failure detection and the heater current will not be measured.

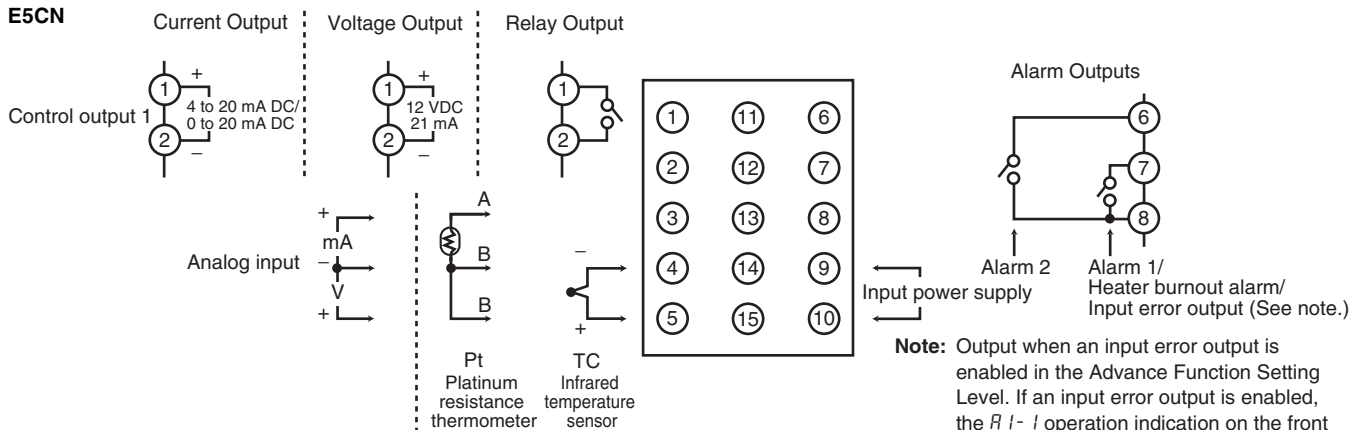

## ■ Electrical Life Expectancy Curve for Relays (Reference Values)

**Note:** Do not connect a DC load to a Controller with a Long-life Relay Output.

# External Connections

- Voltage outputs (control outputs) are not electrically insulated from the internal circuits. When using a grounding thermocouple, do not connect any of the control output terminals to ground. If the control output terminals are connected to ground, errors will occur in the measured temperature values as a result of leakage current.
- Standard insulation is applied between any of the following: power supply terminals, input terminals, output terminals, and communications terminals (for models with communications). If reinforced insulation is required, provide additional insulation, such as spacial distance or material insulation, as defined by IEC 60664 suitable for the maximum operating voltage.

The input power supply depends on the power supply specification of the Controller and is either 100 to 240 VAC or 24 VAC/DC (no polarity).

Terminals 11 to 15 do not exist on models without options (heater burnout detection, control output 2, event inputs, or communications). Terminal applications depend on the model of the Controller.

**E5CN-U**

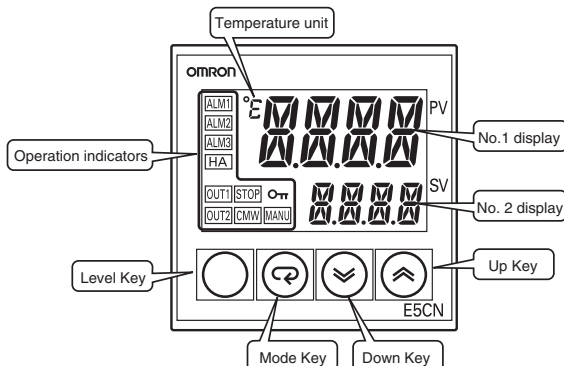

The input power supply depends on the power supply specification of the Controller and is either 100 to 240 VAC or 24 VAC/DC (no polarity). Order the P2CF-11 or P3GA-11 Socket separately. (See page 14.)

# Nomenclature

E5CN  
E5CN-U

The front panel is the same for the E5CN and E5CN-U.

**Connection Example**

## Adapter

**Note:** Use this Adapter when the panel has already been prepared for the E5B□.

### Y92F-45

### Mounted to E5CN

## E5CN-U Wiring Socket

### Front-connecting Socket

#### P2CF-11

### Terminal Layout/Internal Connections (Top View)

### Mounting Holes

**Note:** Can also be mounted to a DIN track.

**Note:** A model with finger protection (P2CF-11-E) is also available.

### Back-connecting Socket

#### P3GA-11

### Terminal Layout/Internal Connections (Bottom View)

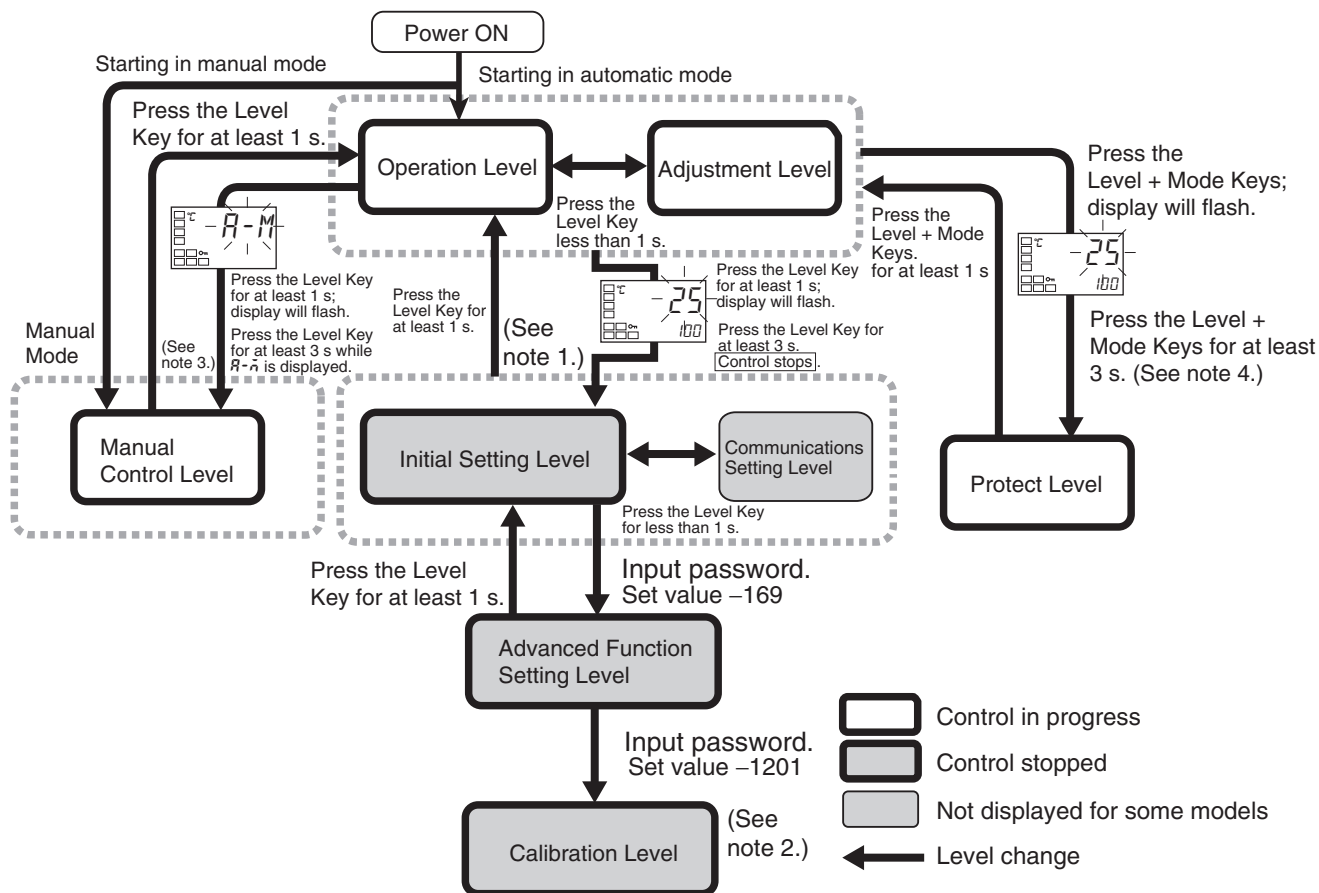

**Note:** 1. Using any other sockets will adversely affect accuracy. Use only the specified sockets.

2. A Protective Cover for finger protection (Y92A-48G) is also available.

# Operation

## ■ Outline of Operation Procedures

The following diagram illustrates the entire setting level. A password is required to enter the advance function setting level and the calibration level. Some parameters may not be displayed depending on the protection settings and operation conditions. The control operation will stop when switching from operation level to initial setting level.

- Note:**
1. Operation level entered for software reset.
  2. You cannot move to other levels by operating the keys on the front panel from the calibration level. You must turn OFF the power supply.
  3. You can move only to the operation level by operating the keys on the front panel from the manual control level.
  4. The time taken to move to the protect level can be adjusted by changing the "Move to protect level time" setting.

# Parameters

Some parameters are not displayed depending on the model of the Controller and parameter settings. For details, refer to the E5CN/E5CN-U Temperature Controller User's Manual (Cat. No. H129)

# Improvements to E5CN Functionality

## Changes

Model numbers have been changed to allow for multi-input specifications.

### Before Change

E5CN-□□□TC (models for thermocouples)  
E5CN-□□□P (models for platinum resistance thermometers)

### After Change

E5CN-□□□T  
(Models that support both thermocouples and platinum resistance thermometers)

## Precautions in Replacing Previous Controllers

- The input type setting numbers have changed to allow for multi-input specifications. (The default setting is for a K sensor between -200 and 1,300°C.)
- Previous E5CN Controllers cannot be removed from the case for replacement with new models. Replace the case at the same time.
- The previous ThermoTools cannot be used with the new Controller models. Use the ThermoTools scheduled for marketing from July 2004.
- The height of the front panel that extends when the Controller is mounted to a panel has been reduced from 9 to 6 mm.

### Note: Items That Have Not Been Changed

- Panel cutout dimensions
- Panel interior dimensions for panel mounting
- Wiring terminal sizes
- Wiring terminal arrangement
- Parameter setting procedure

The following items do not change in comparison to the previous E5CN models: Panel cutout, Internal panel dimensions for panel mounting, wiring screw sizes, wiring terminal arrangement, and parameter setting methods.

## Improved Functions

The previous and new models can be easily differentiated by looking at the front panel. The OMRON logo is in a different position.

Item	Previous models (OMRON logo: lower left)	Improved models (OMRON logo: upper left)
Front panel		

Basically, the Controllers are upwardly compatible. The terminal arrangement, terminal sizes, and depth for panel mounting have not been changed. Changes are listed in the following tables. For details, refer to the E5CN/E5CN-U Temperature Controller User's Manual (Cat. No. H129) and to the E5CN Temperature Controller Communications User's Manual (Cat. No. H130).

## ■ Specifications

		(No models with analog inputs)	E5CN-□□L (Models with analog inputs added.) Current input: 4 to 20 mA or 0 to 20 mA Voltage input: 1 to 5 V, 0 to 5 V, or 0 to 10 V
Control outputs	Relay	E5CN-R□□ SPST-NO, 250 VAC, 3 A (resistive load) Electrical life: 100,000 operations min.	E5CN-R□□ SPST-NO, 250 VAC, 3 A (resistive load) Electrical life: 100,000 operations min.
		---	E5CN-Y□□ (Added models with long-life relay outputs.) (To be available soon) SPST-NO, 250 VAC, 3 A (resistive load) Electrical life: 1,000,000 operations min. DC loads cannot be connected.
	Voltage	E5CN-Q□□ 12 VDC ±15% (PNP) Max. load current: 21 mA With short-circuit protection	E5CN-Q□□ 12 VDC ±15% (PNP) Max. load current: 21 mA With short-circuit protection
	Current	E5CN-C□□ 4 to 20 mA DC Load: 600 Ω max. Resolution: Approx. 2,600	E5CN-C□□ 4 to 20 mA DC or 0 to 20 mA DC Load: 600 Ω max. Resolution: Approx. 2,700
Control output 2	Voltage	(No models with two control outputs)	(Option Unit) 12 VDC ±15% (PNP) Max. load current: 21 mA With short-circuit protection
Display method		7-segment digital display and single-LED indicators Character height: PV: 9.9 mm, SV: 6.4 mm	11-segment digital display and single-LED indicator (Improved visibility) (A 7-segment digital display also possible.) Character height: PV: 11.0 mm, SV: 6.5 mm
Transfer output		(No models with transfer outputs)	E5CN-C□□ (current output) Allocated to current output 4 to 20 mA DC or 0 to 20 mA DC Load: 600 Ω max. Resolution: Approx. 2,700

## Other Functions

Item	Previous models	Improved models
<b>Displays</b>	---	Parameter mask function (provided with setting software)
	PV display switch between 2 colors (red/green)	PV display switch between 3 colors (red/orange/green)
	---	Display characters can be switched between 7-segment and 11-segment displays.
<b>Inputs</b>	Temperature input shift (1-point shift for temperature input, 2-point shift for no-contact sensor input)	Temperature input shift (2-point shift also possible for temperature input)
	---	Display character switch (7-segment/11-segment)
<b>Outputs</b>	---	Manual outputs
	---	MV at stop
	---	MV at PV error
	---	Loop burnout alarm
<b>Controls</b>	Control period: 1 to 99 s	Control period: 0.5 or 1 to 99 s
	---	Robust tuning
<b>Alarms</b>	---	Alarm delays
	---	Alarm SP selection (selection of alarm operation of SP indicator)
<b>Others</b>	---	Simple programming function
	---	Password to move to protect level
	---	Setting software port

## Characteristics

Item	Previous models	Improved models
Sampling period	500 ms	250 ms

## Communications Specifications

Item	Previous models	Improved models
Communications protocols	CompoWay/F (SYSWAY)	CompoWay/F (SYSWAY), Modbus
Baud rate	1200, 2400, 4800, 9600, 19200 bit/s	1200, 2400, 4800, 9600, 19200, 38400 bit/s

## Heater Burnout/SSR Failure Detection Characteristics

Item	Previous models	Improved models
<b>Maximum heater current</b>	Option Units Single-phase 50 A VAC	Option Units Single-phase 50 A AC
	---	Option Units (two CT inputs) Three-phase 50 A AC
<b>SSR failure detection</b>	---	SSR failure detection

# Precautions

**Note:** Refer to the ntlp: Electronic Temperature Controller Catalog (Cat. No. ntlp) for common precautions.

## ⚠ CAUTION

Do not touch any of the terminals while the power is being supplied. Doing so may occasionally result in minor electric shock.

Do not allow pieces of metal or wire cuttings to get inside the Temperature Controller. Failure to do so may occasionally result in minor electric shock, fire, or damage to equipment.

Do not use the Temperature Controller in locations subject to flammable or explosive gas. Doing so may occasionally result in minor injury due to explosion.

Do not attempt to disassemble, modify, or repair the Temperature Controller or touch any internal components. Doing so may occasionally result in minor electric shock, fire, or damage to equipment.

Caution: Danger of Electric Shock

- This Temperature Controller is UL-listed as an open-type process controller. Use it in a control panel structure so that fire will not leave the panel.
- When using two or more cutoff switches, turn OFF all switches so that no power is supplied to the Temperature Controller before maintenance or inspections.
- Signal inputs are SELV restricted circuits. (See note 1.)
- Caution: To reduce the danger of fire or electric shock, do not internally connect the outputs of different class 2 circuits. (See note 2.)

If the output relay is used beyond its life expectancy, its contacts may occasionally become fused or burned. Always consider the actual application conditions and be sure to use the output relay within its rated load and electrical life expectancy. The life expectancy of the output relay varies considerably according to its switching capacity and operating conditions.

Fire may occasionally occur if terminal screws become loose. Tighten the terminal screws using a torque between 0.74 and 0.90 N·m.

Make settings for the Temperature Controller that are suitable for the controlled system. Failure to do so may result in unexpected operation occasionally resulting in damage to equipment or personal injury.

Warning: To reduce the danger of electric shock or fire, use the Temperature Controller in a controlled environment relatively free from polluting materials.

Take appropriate safety measures, such as installing a separate monitoring system, to ensure safe operation in the event of a malfunction of the Temperature Controller. Loss of operation control or alarm outputs due to malfunction may occasionally result in physical damage to the controlled system or equipment.

- Note:**
- An SELV circuit is one separated from the power supply with double insulation or reinforced insulation, that does not exceed 30 V r.m.s. and 42.4 V peak or 60 VDC.
  - A class 2 power supply is one tested and certified by UL as have the current and voltage of the secondary output restricted to specific levels.

## Precautions for Safe Use

- Do not use the Temperature Controller in the following locations.
  - Locations exposed to radiated heat from heating devices
  - Locations subject to exposure to water or oil
  - Locations subject to direct sunlight
  - Locations subject to dust or corrosive gas (especially sulfide gas or ammonia gas).
  - Locations subject to severe temperature changes
  - Locations subject to icing or condensation
  - Locations subject vibration or strong shock
- Use and store the Temperature Controller within the rated ambient temperature and humidity. When two or more Temperature Controllers are mounted horizontally close to each other or vertically next to one another, the internal temperature will increase due to heat radiated by the Temperature Controllers and the service life will decrease. In such a case, use forced cooling by fans or other means of air ventilation to cool down the Temperature Controllers.
- Allow enough space around the Temperature Controller to ensure proper heat dissipation. Do not block the ventilating holes.
- Be sure to wire terminals properly using the correct polarity.
- Use crimp terminals with the specified dimensions (M3.5, width 7.2 mm max.). Use wires of a thickness of AWG24 (0.205 mm<sup>2</sup>) to AWG14 (2.081 mm<sup>2</sup>). The exposed current-carrying part to be inserted into terminals must be 5 to 6 mm.
- Do not connect anything to unused terminals.
- Allow as much space as possible between the Controller and devices that generate powerful high frequencies (high-frequency welders, high-frequency sewing machines, etc.) or surge. Keep the wiring for the Temperature Controller's terminal block away from power cables carry high voltages or large currents. Also, do not wire power lines together with or parallel to Temperature Controller wiring.
- Use the Temperature Controller within a power supply voltage and load that meet all specifications and ratings.
- Set up the power supply so that the voltage will reach the rated voltage within 2 seconds after turning ON.
- Allow at least 30 minutes for the Temperature Controller to warm up.
- When using self-tuning, turn ON power for the load (e.g., heater) at the same time as or before supplying power to the Temperature Controller.
- Install the appropriate switches and circuit breakers and label them accordingly so that power can be turned OFF in an emergency by the person operating the Temperature Controller.
- If you remove the Controller from its case, do not touch or apply shock to the electronic parts inside. When placing the Controller back in the case, make sure that electronic parts do not come in contact with the case.
- Use alcohol to clean the Temperature Controller. Do not use thinner or other solvent-based substances.
- It will require 2 seconds for the outputs from the Temperature Controller to stabilize after turning ON the power supply. Design the system (e.g., the control panel) to allow for this time.
- Outputs will turn OFF depending on the mode when switching to the initial setting mode. Confirm system safety before switching the mode.

## Precautions for Correct Use

### Service Life

- Use the Temperature Controller within the following temperature and humidity ranges:  
 Temperature: -10 to 55°C (with no icing or condensation)  
 Humidity: 25% to 85%  
 If the Controller is installed inside a control board, the ambient temperature must be kept to under 55°C, including the temperature around the Controller.
- The service life of electronic devices like Temperature Controllers is determined not only by the number of times the relay is switched but also by the service life of internal electronic components. Component service life is affected by the ambient temperature: the higher the temperature, the shorter the service life and, the lower the temperature, the longer the service life. Therefore, the service life can be extended by lowering the temperature of the Temperature Controller.
- When two or more Temperature Controllers are mounted horizontally close to each other or vertically next to one another, the internal temperature will increase due to heat radiated by the Temperature Controllers and the service life will decrease. In such a case, use forced cooling by fans or other means of air ventilation to cool down the Temperature Controllers. When providing forced cooling, however, be careful not to cool down the terminals sections alone to avoid measurement errors.

### Measurement Accuracy

- When extending or connecting the thermocouple lead wire, be sure to use compensating wires that match the thermocouple types.
- When extending or connecting the lead wire of the platinum resistance thermometer, be sure to use wires that have low resistance and keep the resistance of the three lead wires the same.
- Mount the Temperature Controller so that it is horizontally level.
- If the measurement accuracy is low, check to see if input shift has been set correctly.

### Waterproofing

The degree of protection is as shown below. Sections without any specification on their degree of protection or those with IP□0 are not waterproof.

Front panel: NEMA4X for indoor use (equivalent to IP66)  
 Rear case: IP20, Terminal section: IP00  
 (E5CN-U: Front panel: Equivalent to IP50, rear case: IP20, terminals: IP00)

### Operating Precautions

- It takes approximately two seconds for the outputs to turn ON from after the power supply is turned ON. Due consideration must be given to this time when incorporating Temperature Controllers in a sequence circuit.
- When using self-tuning, turn ON power for the load (e.g., heater) at the same time as or before supplying power to the Temperature Controller. If power is turned ON for the Temperature Controller before turning ON power for the load, self-tuning will not be performed properly and optimum control will not be achieved.
- When starting operation after the Temperature Controller has warmed up, turn OFF the power and then turn it ON again at the same time as turning ON power for the load. (Instead of turning the Temperature Controller OFF and ON again, switching from STOP mode to RUN mode can also be used.) Avoid using the Controller in places near a radio, television set, or wireless installing.
- These devices can cause radio disturbances which adversely affect the performance of the Controller.

## Mounting

### Mounting to a Panel

- To mount the Controller so that it is waterproof, insert the waterproof packing onto the Controller. Group mounting does not allow waterproofing. The waterproof packing is not required if waterproofing is not necessary. The Panel Mounting Adapter is also included with the E5CN-U. Waterproof packing is not included with the E5CN-U.
- Insert the E5CN/E5CN-U into the mounting hole in the panel.
- Push the adapter along the Controller body from the terminals up to the panel, and fasten it temporarily.
- Tighten the two fixing screws on the adapter. Alternately tighten the two screws a little at a time to keep them balanced. Tighten them to a torque of 0.29 to 0.39 N·m.

### Attaching the Terminal Cover

Make sure that the "UP" letters on the E5CN are at the top and insert the terminal cover into the holes at the top and bottom of the Controller.

### Removing the Controller from the Case

When carrying out maintenance on the Controller, the Controller can be removed from the case with the terminal leads still attached. The Controller can be removed from the case only with the E5CN. It cannot be removed with the E5CN-U.

- Insert the tool into the slots (one on the top and one on the bottom) and release the hooks.
- Insert the tool into the gap between the front panel and rear case and pull out the front panel slightly. Hold both sides of the front panel and draw out the Controller towards you. Do not apply unnecessary force.
- Before inserting the Controller, confirm that the sealing rubber is in place. Insert the Controller into the rear case until you hear a click. Press on the hooks on the top and bottom of the rear case to be sure that the hooks are securely locked in place. Be sure that electronic parts do not come in contact with the case.

## Wiring Precautions

- Separate input leads and power lines to protect the Controller and its lines from external noise.
- Use wires of a thickness of AWG24 (0.205 mm<sup>2</sup>) to AWG14 (2.081 mm<sup>2</sup>).  
The exposed current-carrying part to be inserted into terminals must be 5 to 6 mm.
- We recommend using crimp terminals when wiring the terminals.
- Tighten terminal screws to a torque of 0.74 to 0.90 N·m.
- Use the following type of crimp terminals for M3.5 screws.

# Warranty and Application Considerations

## Read and Understand this Catalog

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

## Warranty and Limitations of Liability

### WARRANTY

OMRON's exclusive warranty is that the products are free from defects in materials and workmanship for a period of one year (or other period if specified) from date of sale by OMRON.

OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, REGARDING NON-INFRINGEMENT, MERCHANTABILITY, OR FITNESS FOR PARTICULAR PURPOSE OF THE PRODUCTS. ANY BUYER OR USER ACKNOWLEDGES THAT THE BUYER OR USER ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE. OMRON DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED.

### LIMITATIONS OF LIABILITY

OMRON SHALL NOT BE RESPONSIBLE FOR SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS, OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED ON CONTRACT, WARRANTY, NEGLIGENCE, OR STRICT LIABILITY.

In no event shall the responsibility of OMRON for any act exceed the individual price of the product on which liability is asserted.

IN NO EVENT SHALL OMRON BE RESPONSIBLE FOR WARRANTY, REPAIR, OR OTHER CLAIMS REGARDING THE PRODUCTS UNLESS OMRON'S ANALYSIS CONFIRMS THAT THE PRODUCTS WERE PROPERLY HANDLED, STORED, INSTALLED, AND MAINTAINED AND NOT SUBJECT TO CONTAMINATION, ABUSE, MISUSE, OR INAPPROPRIATE MODIFICATION OR REPAIR.

## Application Considerations

### SUITABILITY FOR USE

OMRON shall not be responsible for conformity with any standards, codes, or regulations that apply to the combination of products in the customer's application or use of the products.

Take all necessary steps to determine the suitability of the product for the systems, machines, and equipment with which it will be used.

Know and observe all prohibitions of use applicable to this product.

NEVER USE THE PRODUCTS FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCTS ARE PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

## Disclaimers

### PERFORMANCE DATA

Performance data given in this catalog is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of OMRON's test conditions, and the users must correlate it to actual application requirements. Actual performance is subject to the OMRON *Warranty and Limitations of Liability*.

### CHANGE IN SPECIFICATIONS

Product specifications and accessories may be changed at any time based on improvements and other reasons. Consult with your OMRON representative at any time to confirm actual specifications of purchased product.

### DIMENSIONS AND WEIGHTS

Dimensions and weights are nominal and are not to be used for manufacturing purposes, even when tolerances are shown.

### ALL DIMENSIONS SHOWN ARE IN MILLIMETERS.

To convert millimeters into inches, multiply by 0.03937. To convert grams into ounces, multiply by 0.03527.

Cat. No. H126-E1-01 In the interest of product improvement, specifications are subject to change without notice.
